

Backend Engineer with **4 years** building **distributed systems** that money moves through. Sub-owns a financial platform processing **INR 130 Cr** across **1.5 L+** transactions at **99.9%** uptime with **zero missed settlement deadlines**, built on **Python, Django**, and **AWS**. Owns design and review for the module and mentors junior engineers.

EXPERIENCE

Easebuzz Pvt Ltd

SDE-2 Backend Engineer · Capital & Infrastructure

Pune, India

March 2025 - Present

- **Payments Platform (eNACH) — Sub-Owner:**

Architected an end-to-end **transaction processing** pipeline in **Django** with **PostgreSQL**, covering the full lifecycle from **debit initiation** to **settlement**. Scaled from single-merchant launch to **INR 130 Cr** processed in five months, handling **1.5 L+** transactions and migrating a further **1.5 L** off the legacy system with **zero data loss**.

Zero missed settlement deadlines since launch, guaranteed by a **failure-retry mechanism** designed end-to-end; platform sustains **99.9%** uptime, using **AWS Batch** on **Fargate** with **EventBridge**-driven scheduling (provisioned via **Boto3**) to keep CPU-intensive jobs off application servers.

Designed a modular, scalable integration framework using configurable adapters, cutting partner bank onboarding time **50%** across **4** live integrations, plus a distributed **batch processing** pipeline handling **50k-row** files via **concurrent** chunk processing and **asynchronous** job orchestration.

Designed and shipped an in-house **Refund Module** — a capability the upstream network does not provide natively — owning the POC, design document, and cross-functional review through to production.

Sub-own the platform: author design documents, run cross-functional **POCs**, own **code review**, and **mentor** SDE-1s and interns.
